

A Free and Open Source Content Management System.

A powerful building material for highly
designed content-centric websites.

In-Context Editing

When you build your website with concrete5, you can easily change content right from your web browser. Simply click edit and create content changes right on the spot. It's that easy!

SEO is a breeze!

Add meta data to any page or image as you add them.

“It saved us time
and money with very
happy clients.”

webconcentrate.com

“Designed to be
exceptionally easy.”

“Unparalleled end user editing experience.”

cmsdesignresoucre.com

“We found the system to be sleek, responsive and easy to use”

cmscritic.com

Brand Loyalty

“concrete5 has the best 12 month period of any CMS in the Water and Stone survey, a remarkably strong performance for such a young system.

[No other system we looked at came close to showing the growth seen by concrete5.](#)

The fact that the system also performed well in the 2010 Report leads us to the conclusion that concrete5 is a contender, and bears close watch.”

Ric Shreve, waterandstone.com

Improve Productivity

We designed concrete5 to be a flexible toolbox for our own full service web shop's CMS needs. Sure, the in-context editing is simple to use, but concrete5 is by no means a lightweight. You can build big, complicated powerful applications with it very quickly. You'll also find that its flexible architecture makes it much easier to respond quickly as your client gets involved. Once you know what you're doing, you'll find building a site with concrete5 is a fast process.

Active Community

Join an active community of developers, designers and business owners. There are more than 250,000 concrete5 installs running on the web. Our community at concrete5.org is over 100,000 members strong. That's a lot of people who might help you finish this project or hire you to start the next one.

517% Download Increase

The most year-on-year improvement of any system.

Secure

You are making a safe choice with concrete5. It has a long history as a commercial product starting in 2003. Since going Open Source in 2008, we have grown to power hundreds of thousands of sites. Any PHP developer will be able to pick up concrete5 quickly and we are getting the word out faster than ever.
